The watershed is home to over 90 species of native fish and 75 species of native plant populations. Landmarks such as the dam on Fleming Creek and the western tributaries, as well as such historic places such as the City of Ann Arbor, feature unique wildlife. The Huron River Watershed Council (HRWC) coordinates programs and projects aimed at protecting and restoring the Huron River. Our volunteer efforts aim to protect and restore the Huron River. Our volunteer efforts aim to protect and restore the Huron River. For more Huron River watershed maps and information on how you can get involved at the Huron River Watershed Council (HRWC), visit hrwc.org/our-watershed.

## The Watershed and Creeksheds

- **The Watershed**: The Huron River flows 128 miles (206 km) from its headwaters to its mouth. The Huron River watershed covers just over 900 square miles (1,448 km²) and encompasses all the land, creeks, and streams that drain into the Huron River, which is located in the Lake Michigan basin. From the Huron River’s headwaters to its mouth, the elevation changes from 1,217 feet (371 km) to 333 feet (101 km)

## The Natural River District

- **River, Stream, Lake, Pond**: While the majority of the land in the Huron River watershed contains natural waterways, there are also lakes and ponds

## The Huron River Water Trail

- **River, Paddling Trail**: The Huron River Water Trail—an inland paddling trail recognized for its natural and cultural beauty—begins directly to Ann Arbor and connects to the Great lakes. The 47-mile (75 km) trail winds its way through the Huron River and connects to the Great Lakes.

## The Watershed High and Low Points

- **Waterfalls, State Parks**: The watershed includes 96 dams and lake level control structures. The first dams were constructed in the late 1800s on Fleming Creek and Mill Creek. The 19 dams that are in the watershed are unique to the Huron River watershed. The 19 dams range in size from 3 feet (1 m) to 25 feet (8 m) in height. The 19 dams are located in the Huron River watershed.

## Map Key

- **Urban Area**: The watershed includes 96 dams and lake level control structures. The 19 dams that are in the watershed are unique to the Huron River watershed. The 19 dams range in size from 3 feet (1 m) to 25 feet (8 m) in height. The 19 dams are located in the Huron River watershed.

## The Huron River Watershed Council (HRWC)

- **Volunteer Efforts**: Volunteers help protect and restore the Huron River. They help with water quality monitoring, habitat restoration, and education programs. Volunteers can help protect and restore the Huron River. They can also help with water quality monitoring, habitat restoration, and education programs.
