Managing Your Septic System

A septic tank is a community-wide wastewater system that consists of three main parts: the septic tank, the drain field, and the soil. The septic tank is the holding tank where waste is stored before it is treated by the drain field and soil. The drain field is where the treated wastewater is dispersed into the soil, which helps to remove nutrients and pathogens.

Recommendations

- Follow manufacturer's guidelines for care and maintenance of the equipment.
- Regularly check and clean the filters.
- Inspect the system for any signs of wear or damage.
- DO NOT:
  - Allow children or pets near the equipment.
  - Operate the equipment without the proper filters.
  - Overload the system.

Safety Considerations

- Wear appropriate personal protective equipment (PPE) when working with the system.
- Ensure the system is properly connected and grounded.
- Keep the area around the equipment clear of debris and flammable materials.

Conclusion

The system is a valuable addition to the facility, providing efficient and effective water treatment. Regular maintenance and proper operation are crucial for maximizing its benefits.

- When the next cleaning may be needed, consult your maintenance schedule and other records to determine when your septic tank should be cleaned.

- Your house components in relation to your septic system are part of the contribution. Use the grid provided to locate the location of each component. If you do not know where any component is located, use other information in your septic tank is located.
